Key Features

Overview

- › This collection provides 10 production-ready Python scripts for common automation tasks. Each script includes detailed comments, error handling, and configuration instructions.
- › `from pathlib import Path`
- › `def organize_files(directory):`
- › `"""Organize files by extension into subfolders."""`
- › `path = Path(directory)`
- › `for file in path.iterdir():`
- › `ext = file.suffix.lower()`
- › `target_dir = path / ext.lstrip('.')`
- › `target_dir.mkdir(exist_ok=True)`
- › `shutil.move(str(file), str(target_dir / file.name))`

Requirements

- › Install dependencies via: ``pip install requests beautifulsoup4 Pillow PyPDF2``

Usage

- › Copy the desired script into a `.py` file.
- › Modify configuration variables (e.g., file paths, credentials).
- › Run with Python 3.6+.

License

- › MIT - Free to use and modify.

What's Included

- ✓ Complete source code files
- ✓ Fully commented & documented
- ✓ Requirements file included
- ✓ Setup & installation guide
- ✓ Instant digital download

Specifications

FORMAT	Source Code Files
DIFFICULTY	Intermediate
COMPATIBILITY	Python 3.6+ / Node.js / Browser
DELIVERY	Instant Digital Download

Requirements

No special requirements. Instant digital download.
